March 2024

Final Edition for the LINKS Project

As we wrap up the LINKS project, we thank our partners and stakeholders for their dedication and commitment. Although our formal collaboration is ending, the impact of our work will endure in the youth work community for years to come. We urge all partners to uphold digital security initiatives and incorporate the LINKS project outcomes into their ongoing endeavours.

The LINKS project consortium extends heartfelt appreciation to all partners, stakeholders, and supporters who have contributed to the project's success. Your passion, expertise, and collaborative approach have played a vital role in achieving our common goal of empowering youth workers with digital security skills.

As we bid farewell to the LINKS project, let us celebrate our achievements and continue our journey towards a safer and more secure digital future for all.

About LINKS…

The LINKS project is an Erasmus+ project that was launched on March of 2022 and serves two purposes by directly and actively assisting youth workers in the development and enhancement of their digital sovereignty and security skills and competencies.

…Project Aim

1. Youth workers will increase and broaden their expertise on a personal level.

2. NGOs and other groups funded by these organizations will be well-protected and learn how to fight against abuse and/or cyber-attacks on a societal level.

Celebrating Achievements

The LINKS project has been a remarkable journey of collaboration, innovation, and shared learning. Together, we have achieved significant milestones and made tangible contributions towards advancing digital sovereignty and security competencies among youth workers across Europe. From the development of the competency framework to the dissemination of resources and training modules, each aspect of the project has contributed to our overarching goal of empowering youth workers with the knowledge and skills to navigate the digital landscape safely and responsibly.

Key Highlights

- Development of the Digital Security Competence Framework: One of the project's cornerstones, the Digital Security Competence Framework, provides a comprehensive reference for assessing and enhancing digital sovereignty and cyber security competencies among youth workers. Through a collaborative and iterative process, we have developed a robust framework that addresses our target audience's unique challenges and needs.

- Capacity Building and Training Initiatives: The LINKS project has facilitated numerous capacity-building activities and training initiatives to equip youth workers with practical tools and resources to enhance their digital security competencies. From online courses to interactive workshops, these initiatives have empowered participants to strengthen their understanding of digital threats and adopt proactive security measures.
